Half of participants receive the treatment, and half receive a control which may be simply a placebo, or may be an existing treatment with a known effectiveness. For applied and clinical biological research, there may be a very definite effect size that you want to detect.

Evidence-based recommendations produced by NICE. The number needed to treat NNT is an epidemiological measure used in communicating the effectiveness of a health-care intervention, typically a treatment with medication. When and where are the results needed?

Cost-benefit analysis has put the break on needed regulatory protections. Information numbers are often reported alongside quotes or interviews to effectively communicate a message.
