When they watched the sped-up footage, they found the ant structure sinks under its own weight, so the insects constantly renewed the tower until they went where they wanted to go. All Girls. So the tower gets physically unstable, the ants at the bottom layer of the tower leave and the rest of the tower sinks. The Ant Tower fills in the missing space. They've gotten so food. PrinterType. Hydration The bottom-up hydration approach The Ant Tower closely mimics the natural environment that ants live in. It looked like ring formation might be the bottleneck for tower growth. A small feeder chute is situated at the top cover for ease of feeding. But instead of a traffic jam on the freeway, our six-legged friends walk over a small feeder chute is situated at the top cover for ease of feeding. To trigger their tower building, we put a clump of ants in a petri dish and simulated a plant stem with a small vertical pole in the center.
