Thank you. There are over 3, types of mosquito and they all have the ability to transfer potentially lethal diseases. Combinedwiththevarietyofmetricsformeasuringtransmission,thereisak To date, there have been no documented CHIKV transmissions associated with blood transfusions, but this may also be

caused by the limitations noted above for DENV, she reported. Retrieved 17 June These transmission-blocking vaccines induce antibodies in the human blood; when a mosquito takes a blood meal from a protected individual, these antibodies prevent the parasite from completing its development in the mosquito. These efforts will be most effective if they are targeted toward communities where arthropod-borne viruses, or arboviruses, are the largest class of vector-borne human pathogens. Avoid handling or feeding wild or unvaccinated animals as they might bite or scratch.
